DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Michael Hoffman on 11/09/2006.

The application has been amended as follows:

Claim 19, line 9, after samples, insert – during a call--.

Allowable Subject Matter

Claims 1, 4-6, 11 and 15-21 are allowed.

The following is an examiner's statement of reasons for allowance: The current invention claims a voice verification system comprising periodically receiving voice samples from a user during a telephone call to generate probability scores, and terminating the user if an average score of the probability scores is less than a predetermined threshold.

Haber (SU 6,185,536) teaches periodically comparing a user's voice inputs to stored user voice prints to authenticate the user. Haber fails to teach using an average score.

Gammel et al (US 5,752,231) teaches computing an average score from scores of matching digits of a voice template. Gammel fails to teach averaging score from periodically matching scores. Gammel also fails to teach terminating a user if the average score is less than a threshold.

Any combination of above references fails to achieve the claimed limitation of generating an average score from probability scores taken periodically, and terminating a user if the average score is less than a predetermined threshold.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Sharma et al (US 6,480,825) teaches an averaging score from different voice recognition technique (column 4, lines 38-47).
